

ENETAK 897

ENETAK 897
 290 ml cartridge, hybrid
 adhesive for artificial
 grass

Monocomponent hybrid adhesive, green color, for application in bonding and sealing artificial grass. Apply on firm and clean surfaces (dust and grease free) It can be applied on surfaces with some moisture. Cord application, which can then be, if deemed convenient, distributed with a toothed trowel. Spray water on the adhesive and place the artificial grass on it, pressing on the joint. Perform the entire process within 15 minutes after applying the adhesive. Approximate yield: 12 m with 5 mm diameter cords.

- Isocyanate, silicones and solvents free.
- Adhesion on surfaces with moisture.
- Resistant to moisture, weathering, aging, ultraviolet radiation (not yellowing) and numerous chemicals.
- Resistant to temperatures from -40°C to + 90°C
- Paintable, if necessary. It does not decrease.
- Fast setting to allow a quick pedestrian traffic
- High tensile strength
- Mid-high permanent elasticity

SPECS:

Shelf life: 12 months (in closed warehouse at 5-35 ° C)
 Skin formation: 40 min
 Green color
 Density (kg / l) 1.29
 Modulus of elasticity 0.66 N / mm²
 Breaking load 1.84 N / mm²
 Elongation at break 400%
 A Shore hardness 30

SECURITY DATA:

Consult the safety data sheet
